# WEATHER OF CONCERN

## Weather of Concern

### **Southwest California:**

- A significant heat wave is expected to affect Southwest California Thursday, 07/05/18 through Sunday, 07/08/18, with the most dangerous heat expected on Friday and Saturday when record triple digit heat will be likely across many inland area.
  - During this time, valley, lower mountain, and desert locations are expected to range between 102 and 112 degrees.
  - This heat will be accompanied by very dry conditions, with the potential for widespread single digit humidities on Friday and possibly Saturday.
  - Gusty northerly winds will affect portions of Southwest California, strongest across the mountains and Santa Barbara south coast where gusts will likely range between 35 and 45 mph. This is a significant heat and fire weather threat, urging everyone to take necessary heat safety precautions and use extreme caution with any potential ignition sources.
  - [Excessive Heat Watches are in effect Friday morning through Saturday evening for portions of the forecast area.](#)
  - [Critical Fire Weather conditions are possible.](#)

### **Southeastern California:**

- Excessive heat is forecast for much of the region on Thursday and Friday; as Thursday, temperatures are expected to become brutal and extremely hazardous for southeastern California Thursday through Friday.
  - High temperatures are forecast to top out above 115 degrees for most urban areas.
  - [Excessive Heat Watches are in effect Thursday morning through Friday evening for portions of the forecast area.](#)

# WEATHER SYNOPSIS BY REGION

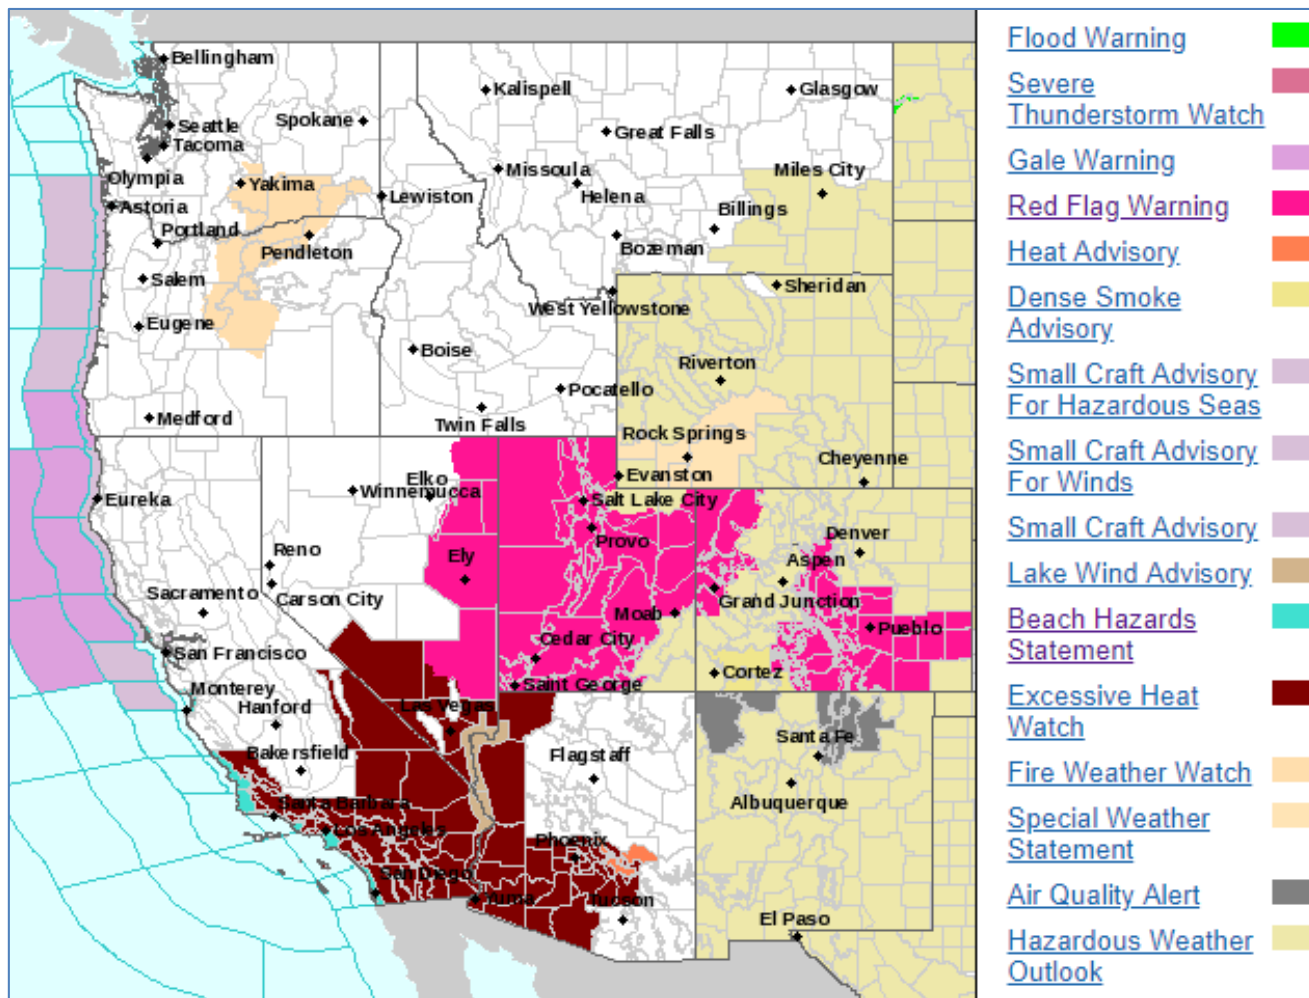

## **NORTHERN CALIFORNIA**

Weak upper trough along the coast will bring more cooling today with daytime highs expected to come in around normal for this time of year. Most locations will see continued onshore flow carrying smoke and haze from the Lake and Yolo county wildfires eastward into the southern Sacramento and Northern San Joaquin valleys. An upper low dropping out of the Gulf of Alaska and into the Eastern Pacific will dig a trough along the west coast bringing still more cooling on Independence Day Wednesday. Daytime highs are forecast to come in around 5 degrees below normal. Stable southwest flow aloft will bring fair skies for evening fireworks. Upper trough moves little on Thursday so expect very little change in the forecast or temperatures.

## **SOUTHERN CALIFORNIA**

A weak upper level trough and onshore flow will keep near to slightly below normal temperatures in most areas through Wednesday. High pressure will build into the region later in the week, and gusty northerly winds will develop in some areas. This will result in very hot and dry conditions across the region. Record temperatures are likely Friday and Saturday, along with critical fire weather conditions. A large south swell is expected to bring dangerous surf and rip currents during this time as well.
